SUMMARY

I am a result driven Senior Cloud, DevOps, SRE, and DevSecOps Engineer with deep expertise in designing, optimizing, and securing modern cloud infrastructure. With years of hands-on experience across AWS ecosystems, I specialize in infrastructure automation, CI/CD pipeline development, and container orchestration using Kubernetes. My strength lies in blending innovation with reliability enabling engineering teams to scale faster, deploy safer, and operate smarter. Passionate about driving operational excellence, I continuously adopt the latest Cloud and DevOps practices to transform ideas into resilient, production-ready systems

CERTIFICATIONS

AWS DevOps Engineer Professional | AWS Solution Architect Associate | AWS SysOps Administrator | Terraform Associate | AWS Security - Specialty | AWS Cloud Practitioner | Google Cyber security | Azure DevOps Engineer Expert | Google IT Support

EDUCATION

University of Buea

- Bachelor of Science in Computer Science - 3.8 GPA

JJ Tech Academy Inc

- Cloud & DevOps Engineering - Overall best graduating student

TECHNICAL SKILLS

Experienced in Windows/Linux (10 years) | AWS Cloud (6 years) | DevOps | DevSecOps | CloudFormation | Terraform | Ansible | Jenkins | Docker | Kubernetes | GitHub Actions | Cloud Migration | Node.js | JavaScript | Go | Cloud Security | Lambda | API Gateway | IaC | PaaS | IaaS | Database | Prometheus | Grafana | Cloud Storage | Containerization | GitOps | IAM | CI/CD | Bash | Python | PowerShell | Helm | Compute | Automation & Scripting | Configuration Management | Elastic Beanstalk

EXPERIENCE

Cloud Engineer II | Sentara Health

Feb 2023 – Jan 2025

- Enhanced system availability and performance by developing a static management system using cache and CDN, resulting in a significantly improved user experience.
- Increased system availability and performance while reducing costs by 15% through the implementation of a proxy image processing and transformation system leveraging cache and CDN.
- Modernized and optimized the infrastructure by introducing three-layer architecture, significantly boosting overall system efficiency.
- Implemented Infrastructure as Code (IaC) using Terraform, streamlining deployment processes and ensuring consistent infrastructure management.

- Partner with Security Team to fix 50+ AWS misconfigurations (IAM, S3, EC2, EKS) via Terraform/Python automation.
- Simplified backup strategies through the use of tagging, ensuring efficient data management and streamlined recovery processes.
- Developed a centralized monitoring dashboard with Grafana and Prometheus, accelerating incident tracking and enhancing response times
- Migrated from traditional infrastructure to containerized solutions using Kubernetes, improving scalability and operational efficiency.

DevOps Engineer | Morgan Stanley

Feb 2021 – Feb 2023

- Provisioned and managed infrastructure using Terraform and Ansible, ensuring efficient and reliable deployment of resources.
- Spearheaded Jenkins to GitHub Actions migration, streamlining build, test, and deployment with Helm, Argo CD, and Kubernetes for faster, secure releases.
- Created CI/CD automation workflows with GitHub Actions, streamlining the development and release process.
- Implemented container management and monitoring with Prometheus, enhancing visibility and control over containerized applications.
- Integrated various tools and systems to improve collaboration and operational efficiency across development and operations teams.
- Conducted troubleshooting and root cause analysis, quickly identifying and resolving issues to minimize downtime and optimize performance.
- Maintained clear and concise documentation of infrastructure configurations and processes, facilitating knowledge transfer and team onboarding.
- Scaled Jenkins agents dynamically within Kubernetes to optimize builds and deployments for Go and Node.js projects.

Site Reliability Engineer | Deloitte

May 2019 – Jan 2021

- Developed and maintained automated CI/CD pipelines using Jenkins, enabling seamless code deployment for each release.
- Provisioned infrastructure, servers, and services using Terraform to enable scalable and consistent environment management.
- Set up monitoring, tracing, and logging tools including ELK Stack, Grafana, and Datadog, providing full visibility into system performance.
- Implemented proactive alerting for services, databases, and logs, reducing the frequency and impact of production issues.
- Managed and monitored Kubernetes-based container clusters, maintaining 99.9% uptime and operational resilience.
- Oversaw and optimized cloud infrastructure on AWS and GCP, handling backups, patching, and auto-scaling.
- Integrated automated testing within the CI/CD pipeline, ensuring release quality and application reliability.

- Led efforts to incorporate cloud security best practices into CI/CD pipelines, automating security checks for every release.
- Consolidated monitoring using Prometheus, Thanos, and Grafana into a single dashboard for centralized system metrics.
- Successfully led migration efforts from GCP to AWS

Founder & Lead Web Developer | Creative Infinix Cameroon

Apr 2016 – Jan 2019

- Designed, developed, and maintained over 40 responsive websites for B2B clients using Wordpress, HTML5, CSS3, JavaScript, and PHP
- Customized themes and plugins to meet unique client requirements, improving UI/UX and functionality.
- Ensured cross-browser compatibility and mobile responsiveness using frameworks like Bootstrap and Tailwind CSS.
- Provided post-launch technical support and training to clients for content updates and CMS usage.
