SUMMARY

- Cloud, DevOps, and DevSecOps Engineer with 7+ years' experience architecting, implementing, and optimizing secure, scalable, highly available infrastructure for mission-critical enterprise workloads.
- Experienced in designing and implementing **preventive security** at scale by integrating policy validation into CI/CD pipelines to automatically block noncompliant infrastructure before deployment (shift-left governance), eliminating post-deployment drift and audit failures.
- Expert infrastructure automation using Terraform, CloudFormation, and Ansible to deliver consistent, repeatable, and compliant deployments across multiple environments.
- Proficient in CI/CD pipeline design and optimization using Jenkins, GitHub Actions, Helm, and Argo CD, improving release speed, security, and reliability.
- Experienced in Kubernetes orchestration across AWS (EKS), Azure (AKS), and GCP (GKE), including migrating legacy workloads to containerized environments for better scalability and agility.
- Strong multi-cloud background, with deep AWS expertise and working exposure to Microsoft Azure and Google Cloud Platform (GCP) for hybrid and cross-cloud solutions.
- Proven success in Cloud security posture by automating the remediation of critical misconfigurations across core AWS services and integrating comprehensive security scanning into CI/CD Pipelines.
- Experienced in monitoring, logging, and observability using Prometheus, Cloud watch, Grafana, ELK Stack, EFK Stack and Datadog to enable proactive incident detection and improved system uptime.
- Skilled in cost optimization, disaster recovery planning, and high-availability architecture to meet business continuity and budget objectives.
- Recognized for translating complex business requirements into future-ready cloud solutions that enhance performance, scalability, and operational efficiency.

CERTIFICATIONS

- AWS Certified DevOps Engineer – Professional
- AWS Certified Solutions Architect – Associate
- AWS Certified SysOps Administrator
- AWS Certified Security – Specialty
- AWS Certified Cloud Practitioner
- Terraform Associate
- Microsoft Certified: Azure DevOps Engineer Expert
- Google Cybersecurity Certificate
- Google IT Support Certificate
- Certified Kubernetes Administrator (CKA) - In Progress

TECHNICAL SKILLS

- Cloud Platforms: AWS (EC2, S3, IAM, Lambda, ECS, VPC, RDS, CloudFormation, Elastic Beanstalk), Azure (VMs, Storage, DevOps, Functions), GCP (Compute Engine, Cloud Storage)
- DevOps & IaC: Terraform, CloudFormation, Git, GitLab, Ansible, GitOps, Helm, Jenkins, Maven, Gradle, GitHub Actions, Argo CD
- Containers & Orchestration: Docker, Kubernetes, EKS, AKS, GKE
- Languages & Scripting: Python, Bash, PowerShell, Go, JavaScript, Node.js, React, Ruby
- Monitoring & Logging: Cloud Watch, Prometheus, Grafana, ELK Stack, EFK Stack, Datadog, Thanos

- DevSecOps/ Cloud Security: AWS IAM, PaC (OPA), AWS Security Hub, Prisma Cloud, Wiz, HashiCorp Vault, Checkov, Snyk, Trivy, SonarQube, OWASP ZAP, Semgrep, gitleaks, tfsec, Checkmarx One, Imperva RASP, AWS WAF, AWS Shield
- Compliance Frameworks: CIS, NIST, SOC 2, PCI DSS, HIPAA, GDPR
- Operating Systems: Linux (Ubuntu, RHEL), Windows Server, CentOS
- Collaboration Tools: Jira, Confluence, Service Now, Git, Agile/Scrum Practices
- Other: API Gateway, Elastic Load Balancing, CDN, Cloud Migration, Backup & Recovery Strategies, Nexus, Jfrog, ECR, Docker Hub, Route 53

PROFESSIONAL EXPERIENCE

Lead Engineer Cloud & DevOps – Sentara Health

Feb 2023 – Current | Norfolk, VA (Remote)

- Architected and modernized enterprise AWS infrastructure, achieving 99.9% improvement in application performance and engineering for 99.9% availability to support scalable, high-traffic workloads.
- Engineered and standardized Infrastructure as Code (IaC) using Terraform and CloudFormation, enabling automated, compliant, and repeatable deployments at scale across dozens of environments.
- Integrated Policy-as-Code into CI/CD pipelines to enforce pre-deployment security and compliance, reducing drift, audit failures, and manual reviews.
- Partnered with security teams to automate remediation of 50+ AWS misconfigurations (IAM, S3, EC2, EKS) using Terraform and Python scripts, reducing manual intervention and audit risks.
- Spearheaded the migration of legacy workloads to AWS EKS, driving significant cost savings through optimized resource utilization and enabling on-demand application scalability.
- Developed custom CI/CD workflows integrating GitHub Actions, Helm, and Argo CD for faster, more secure, and automated application releases.
- Engineered and optimized a centralized observability framework using Elasticsearch (ELK), Prometheus, and Grafana, implementing proactive monitoring and alerting to achieve a significant reduction in Mean Time to Recovery (MTTR).
- Developed custom CI/CD workflows integrating GitHub Actions, Helm, and Argo CD for faster, more secure, and automated application releases.
- Championed a "shift-left" security model by engineering automated security scanning (e.g., SAST, DAST, dependency analysis) directly into GitHub Actions CI/CD workflows, enabling the proactive identification and remediation of vulnerabilities before production.
- Designed and automated disaster recovery and backup workflows using tag-based orchestration and AWS-native services, ensuring data integrity, high availability, and rapid recovery of critical workloads.
- Collaborated with cross-functional teams (security, networking, DevOps, application development) to ensure alignment of cloud solutions with business and compliance goals.

DevOps Team Lead – Morgan Stanley

Feb 2021 – Feb 2023 | New York, NY (Remote)

- Directed the migration of enterprise CI/CD pipelines from Jenkins to GitHub Actions, integrating with Helm, Argo CD, and Kubernetes to improve deployment reliability and security.
- Embedded DevSecOps by integrating Snyk, Trivy, and OPA into pipelines
- Provisioned and managed multi-cloud infrastructure (AWS + Azure) using Terraform and Ansible, enabling hybrid cloud strategies and seamless cross-platform deployments.
- Implemented GitOps deployment models for Go and Node.js microservices, reducing deployment errors, improving rollback capabilities, and standardizing release workflows.

- Automated infrastructure scaling policies for Kubernetes clusters, ensuring high availability while controlling operational costs.
- Built infrastructure security automation into pipelines, integrating vulnerability scans, container image checks, and compliance validation before production releases.
- Established a real-time observability framework with Prometheus, Grafana, and Datadog, reducing average incident resolution time through early detection and alerting.
- Conducted post-incident reviews and root cause analyses (RCA) to identify systemic issues, implementing preventive automation for recurring problems.
- Documented architecture designs, pipeline workflows, and operational procedures to improve onboarding efficiency and cross-team collaboration.
- Assisted development teams in containerizing applications for deployment in AWS EKS and Azure AKS, ensuring consistency and portability across environments.

Site Reliability Engineer – Deloitte

May 2019 – Jan 2021 | Washington, DC (Hybrid)

- Designed, deployed, and optimized multi-cloud infrastructure on AWS and GCP, including compute, storage, networking, backups, patching, and auto-scaling for enterprise workloads.
- Managed and monitored Kubernetes clusters across AWS (EKS) and GCP (GKE), achieving 99.9% uptime and ensuring operational resilience for production environments.
- Developed and maintained automated CI/CD pipelines in Jenkins, integrating automated security scans, testing, and compliance validation prior to production releases.
- Provisioned infrastructure, servers, and services using Terraform, enabling scalable, consistent, and repeatable environment deployments.
- Implemented observability stacks including Prometheus, Thanos, Grafana, ELK Stack, and Datadog for full system performance visibility across applications and infrastructure.
- Consolidated monitoring tools into a single unified dashboard, enabling real-time system health tracking and faster incident response.
- Integrated proactive alerting mechanisms for databases, services, and logs, significantly reducing the frequency and impact of production issues.
- Embedded cloud security best practices into CI/CD workflows, ensuring every release underwent automated vulnerability scans and configuration checks.

Founder & Lead Web Developer – Creative Infinix

Apr 2016 – Jan 2019 | Buea CM

- Led the design, development, and maintenance of 450+ responsive websites for B2B clients using WordPress, HTML5, CSS3, JavaScript, and PHP.
- Led the redesign and re-architecture of client websites to be cloud ready, ensuring performance, availability, and long-term scalability.
- Directed migration of workloads to AWS Cloud, leveraging services like EC2, S3, RDS, and Route 53 for improved reliability and security.
- Introduced automation and DevOps practices (e.g., CI/CD integration, backup automation) to streamline deployments and reduce operational overhead.
- Provided post-launch technical support and training to clients for content updates and CMS usage.

EDUCATION

University of Buea Master of Computer Science - 3.89 GPA

University of Buea Bachelor of Science in Computer Science (GPA: 3.8)
