SUMMARY

- Multi-Cloud DevOps/SRE/DevSecOps Engineer with 7 years of experience designing, building, and optimizing scalable, resilient, and secure cloud Infrastructure for enterprise workloads.
- Expert in infrastructure automation using Terraform, CloudFormation, and Ansible to deliver consistent, repeatable, and compliant deployments across multiple environments.
- Proficient in CI/CD pipeline design and optimization using Jenkins, GitHub Actions, Helm, and Argo CD, improving release speed, security, and reliability.
- Experienced in Kubernetes orchestration across AWS (EKS), Azure (AKS), and GCP (GKE), including migrating legacy workloads to containerized environments for better scalability and agility.
- Strong multi-cloud background, with deep AWS expertise and working exposure to Microsoft Azure and Google Cloud Platform (GCP) for hybrid and cross-cloud solutions.
- Proven success in cloud security integration, automating remediation for IAM, S3, EC2, and EKS misconfigurations and embedding security scans into CI/CD workflows.
- Experienced in monitoring, logging, and observability using Prometheus, Grafana, ELK Stack, EFK Stack, and Datadog to enable proactive incident detection and improve system uptime.
- Expert in cost optimization, disaster recovery planning, and designing high-availability architectures to ensure business continuity while aligning with budget and performance objectives.
- Recognized for translating complex business requirements into future-ready cloud solutions that enhance performance, scalability, and operational efficiency.

CERTIFICATIONS

- AWS Certified DevOps Engineer – Professional
- AWS Certified Solutions Architect – Associate
- AWS Certified SysOps Administrator
- AWS Certified Security – Specialty
- AWS Certified Cloud Practitioner
- Terraform Associate
- Microsoft Certified: Azure DevOps Engineer Expert
- Google Cybersecurity Certificate
- Google IT Support Certificate
- Certified Kubernetes Administrator (CKA) - In Progress

TECHNICAL SKILLS

Cloud Platforms: AWS (EC2, S3, IAM, Lambda, RDS, CloudFormation, Elastic Beanstalk), Azure (VMs, Storage, DevOps, Functions), GCP (Compute Engine, Cloud Storage)

DevOps & IaC: Terraform, CloudFormation, GitLab, Ansible, GitOps, Helm, Jenkins, Maven, Gradle, GitHub Actions, Argo CD

Containers & Orchestration: Docker, Kubernetes, EKS, ECS, AKS, GKE

Languages & Scripting: Python, Bash, PowerShell, Go, JavaScript, Node.js, React, Ruby

Monitoring & Logging: Expert in Prometheus, Grafana, ELK Stack (Elasticsearch, Logstash, Kibana), EFK Stack (Elasticsearch, Fluentd, Kibana), Datadog, Thanos, CloudWatch, and Loki for centralized observability, performance tuning, and proactive incident response.

Security / DevSecOps: Expert in AWS Security Hub, Azure Defender, and GCP Security Command Center for cloud native threat detection; advanced in IAM governance and policy enforcement with OPA; skilled in securing Infrastructure as Code (IaC) using Checkov for Terraform/CloudFormation and leveraging Snyk and Trivy for container and application vulnerability scanning; experienced in automating compliance frameworks (CIS, NIST, SOC 2) and embedding continuous security checks into CI/CD pipelines.

Operating Systems: Linux (Ubuntu, RHEL), Windows Server

Collaboration Tools: Jira, Confluence, Service Now, Git, Agile/Scrum Practices
Other: CI/CD, API Gateway, CDN, Cloud Migration, Backup & Recovery Strategies,

PROFESSIONAL EXPERIENCE

DevOps Engineer – Sentara Health

Feb 2023 – Current | Norfolk, VA (Remote)

- Architected and modernized enterprise AWS infrastructure, improving performance and scalability for high availability systems.
- Built and managed Infrastructure as Code (IaC) with Terraform and CloudFormation for automated, repeatable, and compliant deployments across dozens of environments.
- Partnered with security teams to automate remediation of 50+ AWS misconfigurations (IAM, S3, EC2, EKS) using Terraform and Python scripts, reducing manual intervention and audit risks.
- Led migration of legacy workloads to AWS EKS, enhancing container-based scalability and improving resource utilization.
- Operated and maintained centralized observability frameworks using Elasticsearch (ELK Stack), Prometheus, and Grafana, significantly reducing Mean Time to Recovery (MTTR) through proactive monitoring and alerting.
- Developed custom CI/CD workflows integrating GitHub Actions, Helm, and Argo CD for faster, more secure, and automated application releases.
- Created centralized observability and alerting frameworks with Prometheus, Grafana, and ELK Stack, significantly reducing incident detection and MTTR (Mean Time to Recovery).
- Automated disaster recovery and backup processes using tag-based AWS Lambda functions to ensure data integrity and recovery readiness for critical workloads.
- Collaborated with development teams to ensure smooth CI/CD workflows using Git, GitHub Actions, Helm, and Argo CD for automated application releases.
- Collaborated with cross-functional teams (security, networking, DevOps, application development) to ensure alignment of cloud solutions with business and compliance goals.

DevOps Engineer – Morgan Stanley

Feb 2021 – Feb 2023 | New York, NY (Remote)

- Directed the migration of enterprise CI/CD pipelines from Jenkins to GitHub Actions, leveraging deep expertise in Jenkins to ensure a seamless transition while integrating Helm and Argo CD to improve deployment reliability.
- Provisioned and managed multi-cloud infrastructure (AWS & Azure) using Terraform and Ansible, enabling hybrid cloud strategies and seamless cross-platform deployments in a high-concurrency environment.
- Implemented GitOps deployment models for Go and Node.js microservices, reducing deployment errors, improving rollback capabilities, and standardizing release workflows.
- Automated infrastructure scaling policies for Kubernetes clusters, ensuring high availability while controlling operational costs.
- Built infrastructure security automation into pipelines, integrating vulnerability scans, container image checks, and compliance validation before production releases.
- Established a real-time observability framework with Prometheus, Grafana, and Datadog, reducing average incident resolution time through early detection and alerting.
- Collaborated with cybersecurity and compliance teams to ensure infrastructure met SOC 2, ISO 27001, and internal security policies.
- Assisted cross-functional development teams in containerizing Go and Node.js microservices for deployment in AWS EKS and Azure AKS.
- Assisted development teams in containerizing applications for deployment in AWS EKS and Azure AKS, ensuring consistency and portability across environments.

DevOps & Site Reliability Engineer – Deloitte

May 2019 – Jan 2021 | Washington, DC (Hybrid)

- Designed, deployed, and optimized multi-cloud infrastructure on AWS and GCP, including compute, storage, networking, backups, patching, and auto-scaling for enterprise workloads.
- Managed and monitored large Kubernetes clusters across AWS (EKS) and GCP (GKE), achieving 99.9% uptime and ensuring operational resilience for production environments.
- Developed and maintained automated CI/CD pipelines in Jenkins, integrating security scans, automated testing, and compliance validation prior to production releases.
- Provisioned infrastructure and services using Terraform, enabling scalable, consistent, and repeatable environment deployments.
- Implemented and maintained a large-scale observability stack including Elasticsearch (ELK Stack), Prometheus, and Datadog for full system visibility.
- Consolidated monitoring tools into a single unified dashboard, enabling real-time system health tracking and faster incident response.
- Integrated proactive alerting mechanisms for databases, services, and logs, significantly reducing the frequency and impact of production issues.
- Led a cloud migration project from AWS to GCP, improving cost efficiency, compliance alignment, and operational performance.
- Assisted development teams in containerizing applications for Kubernetes deployment, improving deployment speed and scalability.
- Embedded cloud security best practices into CI/CD workflows, ensuring every release underwent automated vulnerability scans and configuration checks.

Founder & Lead Web Developer – Creative Infinix

Apr 2016 – Jan 2019 | Buea CM

- Led the design, development, and maintenance of 450+ responsive websites for B2B clients using WordPress, HTML5, CSS3, JavaScript, and PHP.
- Initially deployed client sites on Hostinger and Ecowebhosting, but encountered frequent downtime, limited scalability, and ongoing maintenance/security challenges.
- Led the redesign and re-architecture of client websites to be cloud ready, ensuring performance, availability, and long-term scalability.
- Directed migration of workloads to AWS Cloud, leveraging services like EC2, S3, RDS, and Route 53 for improved reliability and security.
- Capitalized on AWS advantages such as Scalability & Elasticity, Global Infrastructure, High Availability, Security & Compliance, and Pay-as-You-Go cost efficiency.
- Introduced automation and DevOps practices (e.g., CI/CD integration, backup automation) to streamline deployments and reduce operational overhead.
- Delivered training and post-migration support to clients, ensuring smooth adoption of cloud-based workflows.

EDUCATION

University of Buea Bachelor of Science in Computer Science (GPA: 3.8)
